How comfortable is the treatment?

The LaseMD system has been designed to maximize comfort levels; the fast procedure delivers the laser energy in multiple microbeams ensuring that the treatment will be easily tolerated with or without anesthesia.

How long is the downtime?

There is almost no downtime after a LaseMD treatment. The microbeams and optimized energy levels allow for quicker recovery, so you can return to your daily activities immediately.

How many treatments will I need?

Best results are achieved by completing a regimen of 5 treatments, however, your physician will recommend what is best for your skin and treatment goals.

How long before I see results?

Many patients see results quickly, within a few days, even after the first treatment. Skin will continue to repair and renew itself over the following weeks.

WHY LASEMD

LASEMD POST CARE PROGRAM

LASEMD FOR YOU

SKIN RESURFACING LASER WITH LITTLE TO NO DOWNTIME

LaseMD is a fractional Non-Ablative Laser treatment that uses laser energy to create micro-channels in the skin through which it works its effects. These micro-channels stimulate the body's natural production of collagen and elastin, which helps to improve the overall health and quality of the skin at a cellular level. LaseMD skin resurfacing treatments can be used to improve a wide variety of common skin concerns and imperfections, including treating active acne and acne scarring, sun damage and melasma, fine lines, uneven skin tone and texture, and even tightening skin.

MAJOR INDICATIONS

- Wrinkle Reduction
- Anti-Aging
- Brightening / Whitening
- Melasma
- Pigment Reduction
- Scar Reduction
- Skin Tone / Texture Improvement
- Neck / Hand / Décolleté Rejuvenation
- Hair Regrowth

The LaseMD ampoule series is uniquely designed for the CDS (Cosmeceutical Delivery System) as each ampoule includes the fewest number of ingredients to ensure purity.

VC (Ascorbic Acid)

Vitamin C is one of the strongest naturally occurring antioxidants that encourage younger and healthier skin by promoting healthy collagen structures.

VA (Retinol)

It improves aging skin by switching on and upregulating genes to help the epidermal basal layer keratinocytes to mature into healthy epidermal cells.

TA (Tranexamic Acid)

Tranexamic Acid has been used for decades to help wound recovery and an unexpected side effect that doctors and scientists discovered was that it brightened skin, resulting in the use of compounds to address melasma.

RS (Resveratrol)

RS ampoule contains prime grade (95% purity) resveratrol, a naturally-occurring polyphenol, in nanoparticles combined with low molecular hyaluronic acid.

SC (Stem Cell Conditioned Medium)

SC ampoule contains peptides from stem cell conditioned medium which helps to promote skin rejuvenation by supporting the formation of collagen and elastin fibers.

CK (Human Cord Blood Cell Conditioned Medium + KGF)

CK ampoule contains peptides from human cord blood cell conditioned medium which helps to promote skin rejuvenation. It also contains KGF (Keratinocyte Growth Factor) and Genistein which are known as components promoting hair regrowth.

* Some ampoules may not be available in some countries

WHO IS A GOOD CANDIDATE FOR LASEMD?

- Patients who are not seeing results they want from their normal skin program and are not ready for the downtimes associated with traditional laser treatments
- Patients who want brighter skin tone and improved texture with minimal downtime
- Patients who need an after-care program to complement another laser or alternative approach
- Patients who are looking for safe treatment of neck, décolleté, and body rejuvenation
- Patients who are in need of hair regrowth treatment

Décolleté Rejuvenation / Pigmentation Removal

Scalp Revitalization for Hair Regrowth
